

Mineral Policy & Development Economics

VISION

KB-MIC's vision is to develop and maintain a position as the distinguished geological consultancy of choice for both our employees and clients. Our focus will be primarily on Green and Brown field exploration in Africa.

We are considered "Competent Persons" by internationally recognized resource reporting standards (SAMREC, Ni43-101, and JORC) for Coal, Gold and Platinum Group Metals. Other commodities related experience includes Uranium, Copper, Iron-ore and Manganese.

CORE COMPETENCIES

KB-MIC's competitive advantage lies in its ability to offer clients integrated services from target generation through to CPR documentation for public companies.

Mineral Policy and Development Economics

Resource development decisions will impact society for generations to come. Therefore it is important that governments implement sound policies to strengthen sector governance and enable economic growth. KB-MIC also undertakes strategic regional mineral scans. These studies highlight resource potential, infrastructure requirements, and advantages of ordered development and clustering of projects. These studies also provide preliminary economic analysis and identify downstream development opportunities. KB-MIC uses an analytical methodology that takes a spatial view of a region, identifying potential anchor projects and a supporting spine that can be built upon the region's natural endowments. These can then act as a catalyst for the development of other mineral, tourism and agricultural projects.

Services include:

- ➔ Mineral scans
- ➔ Policy impact assessments
- ➔ Input into mineral policy development
- ➔ Strategic mineral resources reviews
- ➔ Identify policy directions to facilitate cluster development
- ➔ Map economic clusters and upstream economic linkages
- ➔ Develop solutions to facilitate the sustainable development of input industries supplying the minerals industry
